

To get the most benefit from the RDS, the existing database management practices need to be changed. Axis provides clients with a clear customized migration roadmap with a proven 5-Step process that securely migrates and achieves both lower costs and the improved functionality of the cloud.

What is Covered

- **Project Planning:** Interview key stakeholders to understand corporate security policies
- **Migration Metrics:** Create and document key migration metrics
- **Security:** Apply Axis data masking process to ensure data is never at risk
- **Migration Roadmap:** Define a migration plan that moves data to RDS quickly but meets application team requirements
- **Resource:** Create an action plan detailing the next steps
