

Customers purchase Delphix Masking for their Oracle, SQLServer, Sybase, and DB2 databases needs. Naturally, they want to use the same product to mask their Amazon Redshift, DynamoDB, Snowflake, Mongo, Greenplum, and others, so Axis created a solution that is easily integrated into your existing data environments. This allows clients to leverage the benefits of Delphix Masking for their Big Data using a familiar automated interface.

## What is Covered

- **Project Planning:** Interview key stakeholders to understand corporate security policies
- **Data Onboarding:** Configure Delphix Masking based on the client's requirements and Axis' Big Data templates
- **Masking:** Mask the Big Data, iterating as needed
- **Masking Validation:** Validate successfully masked data with your team
- **Resource:** Create a playbook so that the masking can be repeated as needed and an action plan detailing the next steps

## Details

Big Data Masking is a fixed-price engagement and can be customized to handle large-scale environments
