

Companies in the financial and healthcare markets have mainframe systems that run some of their critical business applications and also contain sensitive customer information. Axis developed a starter package that focuses on masking VSAM, DB2, and mainframe file data to meet company data security requirements.

What is Covered?

- **Project Planning:** Interview key stakeholders to understand corporate security policies
- **Data Onboarding:** Configure Delphix Masking based on the client's requirements and Axis Mainframe templates
- **Masking:** Mask the Mainframe Data, iterating as needed
- **Masking Validation:** Validate successfully masked data with your team
- **Resource:** A playbook so that the masking is repeatable and an action plan detailing the next steps

Details

The Mainframe Data Masking is a fixed-price engagement to mask the sensitive data in up to 5 Mainframe VSAM, flat files, or DB2 databases. Axis can customize this package to handle larger-scale environments
