

Oracle Financials, contains customer-sensitive data and often involves ongoing development and testing teams that can be located offshore. To reduce the risk of data breaches, companies have made it a priority to mask Oracle Financial data before using it in a non-production environment.

What is Covered?

- **Product Planning:** Interview key stakeholders to understand corporate security policies and Oracle Financials customization
- **Data Onboarding:** Configure Delphix Masking based on the client's corporate security policies and Axis Oracle Financials templates
- **Masking:** Masks core and custom (flex fields) Oracle Financials data, iterate as needed
- **Masking Validation:** Validate successfully masked data with your team
- **Resource:** A playbook so that the masking can be repeated as needed and an action plan detailing the next steps

Details

The Oracle e-Business Suite Financial Data Masking- Starter Package is a fixed-price engagement that can be used for any size Oracle Financials application environment. Axis will mask the sensitive data in the Oracle Financials core tables as well as any agreed-upon custom tables.
